

Scrollcraft Requirements

An agent-facing visual implementation contract for a readable civic investigation about the Matlock Bend landfill record.

Visual reference from the supplied screen recording. Keep the documentary seriousness while restoring map legibility, evidence dwell, and reliable civic actions.

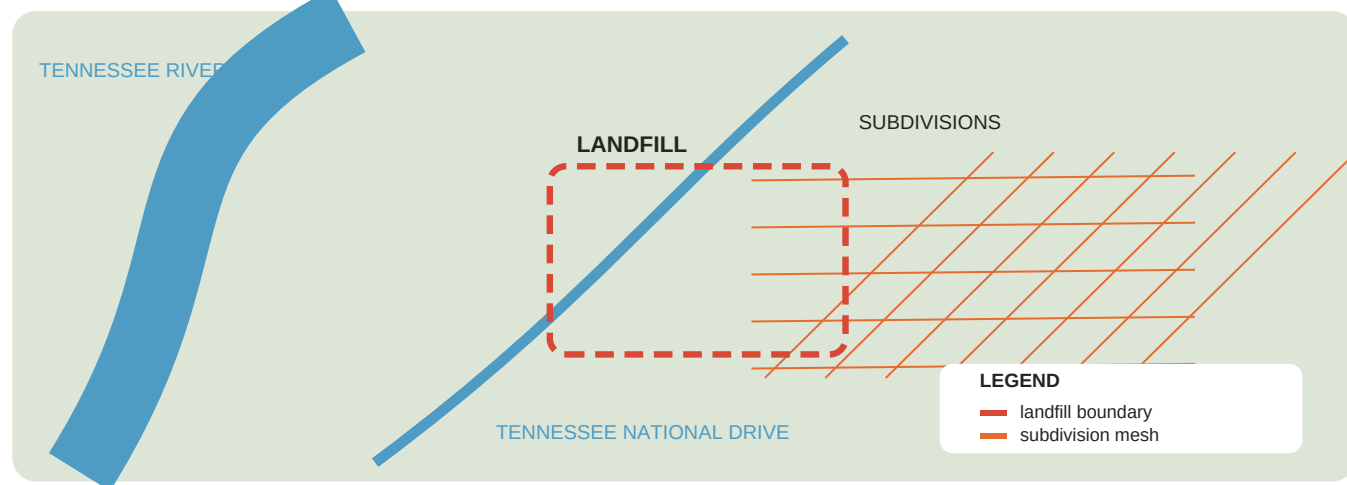

STATUS Requirements extracted from the recording, transcript, current repository, and installed Scrollcraft guidance. The transcript is machine-generated and must be fact-checked before public copy is published.

Implementation target

Build a chaptered editorial page, not a continuous dark video flight. Scroll should feel like turning pages in a public-record investigation: distinct chapter grounds, generous reading time, and a practical ending.

The visitor must leave able to see the geography, understand why the July inspection record matters, open the source records, and choose one concrete next action.

Opening map signature

The map is the signature move. Every annotation must remain visible in static and reduced-motion states; labels and visual forms must work together so color is never the only cue.

- Use charcoal, warm paper, muted sage, safety orange, river blue, and action red.
- Reduce black overlays so terrain and evidence remain inspectable.
- Use large editorial type for chapter statements and readable body/source text for the record.
- Do not invent statistics, map geometry, testimonials, or government endorsement.
- Motion may guide attention, but it cannot be required to understand the story.

Chapter journey

Each chapter changes what the visitor knows and how the visitor feels. Do not repeat one animation treatment across the whole page.

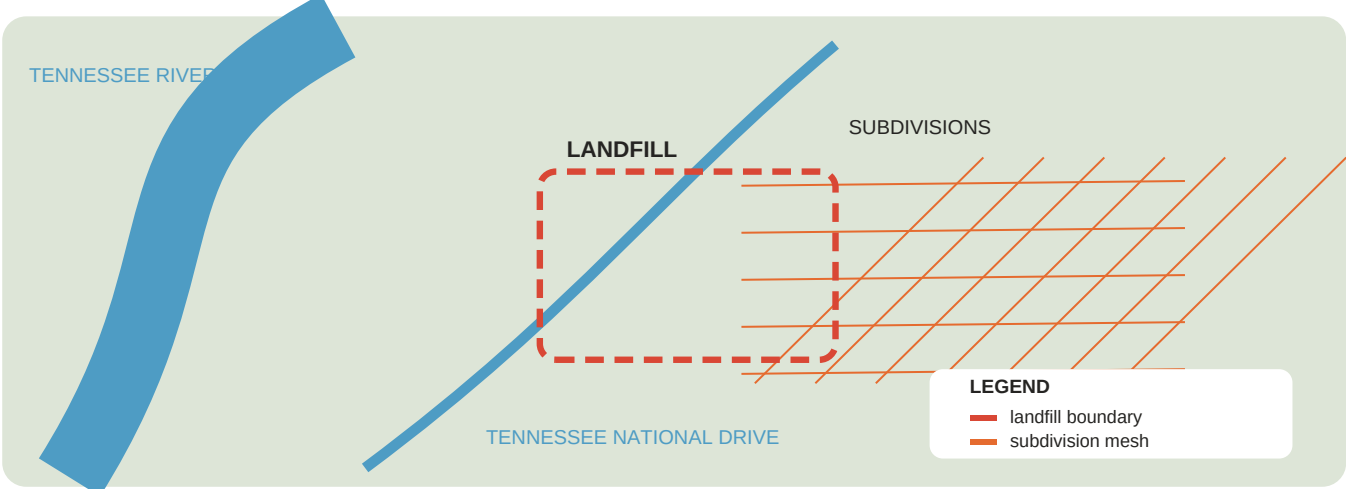

Chapter	Visitor learns	Visual behavior	Feeling
1. Title plate	What place and issue this is	Calm paper/title surface; no unreadable media behind the headline	Curiosity
2. Map orientation	What is next to the landfill	Reveal bounds, route, river, and legend	Unease -> clarity
3. Inspection evidence	What the July inspection documented	Centered evidence plate with long reading dwell	Weight
4. Record and accountability	How the record connects to decision-makers	Centered document spread with real source links	Resolve
5. Take action	What the visitor can do next	Compact action ledger with working controls	Agency

Scrollcraft behavior contract

Requirement	Pass condition
Device variety	Use at least four distinct behavior families; no adjacent chapters share the same treatment.
Meaningful scroll	Every animated chapter changes a visible, meaningful state; no dead scroll or decorative-only progress.
Chapter marker	If retained, the folio identifies the chapter at a readable pace; no fast decorative counter.
Evidence hierarchy	The July inspection chapter gets the strongest dwell and clearest source labeling.
Ending	The final action surface resolves into usable choices rather than fading into an empty footer.

Map requirements

The current recording makes the map too dark and leaves the visitor guessing. The implementation must turn the map into an explanatory diagram with explicit, persistent cues.

Layer	Required cue	Acceptance condition
Far map plate	Aerial or terrain context	Full geographic context remains visible on desktop and mobile.
Landfill boundary	Orange or warm outline / bounding box	Clearly labeled and visible without hover.
Subdivision mesh	Orange mesh or parcel overlay	Distinct from the landfill boundary.
Tennessee National Drive	Blue route line	Named in the legend and not confused with the river.
Tennessee River	Blue band or line	Named in the legend and visibly separate from the road.
Annotations	Leader lines, boxes, or pins	Each label points to the feature it names.

Review cue

At the map midpoint, a reviewer should be able to name all four geographic relationships without hovering, scrubbing, or reading a paragraph first.

Evidence and action requirements

The page earns trust by slowing down for the strongest record, then turning that trust into a small number of honest actions.

Evidence surface

- Center the July inspection/document composition where that improves reading.
- Give the chapter enough scroll room to read the claim, date, and source label.
- Use real repository PDFs or document crops when available; label them as records, not decorative texture.
- Keep captions, dates, and source links attached to the document they describe.
- Avoid transitions that flash past before the visitor can identify what changed.

Action ledger

01

ATTEND

Verify the next commission meeting.

02

REQUEST

Generate and copy a records request.

03

COMMENT

Use mailto or a copyable fallback.

The three paths must be visible and functional: attend a meeting, file a public-records request, and submit written public comment.

Path	Required behavior	Never do
Attend	Link to the current schedule or state that the date must be verified.	Present an unverified date as confirmed.
Request	Open the generator or a reliable copyable request flow.	Leave a dead link or imply a request was filed.
Comment	Use mailto with visible context or a copyable fallback.	Claim an email was sent without a real integration.

Responsive and verification gate

The experience is not complete until the same requirements hold in desktop, mobile, reduced-motion, and keyboard states.

State	Required evidence
Desktop	Opening, map midpoint, inspection evidence, action chapter, and final state screenshots.
Mobile	Screenshots near 390 x 844 and 360 x 640; no horizontal overflow; map labels remain reachable.
Reduced motion	Static composition still shows map overlays, evidence text, source links, and actions.
Controls	Every action and source link tested; copy controls visibly confirm the copied text.
Runtime	No failed local assets/imports; console and request check captured.
External limits	Unconfigured email delivery or live meeting data called out explicitly.

P0 acceptance checklist

- [] First viewport has a complete readable headline and clear next action.
- [] Full map context is visible; the dark treatment does not obscure it.
- [] Landfill, subdivision mesh, Tennessee National Drive, and Tennessee River are explicitly called out.
- [] July inspection evidence is centered, readable, and given adequate dwell.
- [] Chapter 5 transition is slow enough to understand.
- [] Public-records request and public-comment paths work or offer honest fallbacks.
- [] All source/document links resolve to intended records.
- [] Reduced-motion mode preserves the complete story and all actions.
- [] Mobile layout has no horizontal overflow and retains map labels and actions.

Definition of done

A reviewer can look at the map and identify the geography, read the strongest record without racing the scroll, and complete one of the three civic actions without encountering a broken link or a false success message.
